STREAMFLIX CONTENT ANALYTICS

Management Summary Report

To	Chief Executive Officer, StreamFlix
From	Kashif Siddique, Data Analyst Intern
Subject	Platform health, content performance and catalogue priorities
Reporting basis	Viewing activity through May 2026; subscriber status as of 1 June 2026

Executive Summary

StreamFlix is showing strong engagement growth, with 3.33 million total watch hours and viewing activity accelerating sharply into 2026. The subscriber base is in generally healthy condition: 74.66% of subscribers are active and the 25.34% churn rate remains below the project threshold of 30%. Content engagement is also healthy, with an average completion rate of 65.31%, above the 60% target, while watchlist conversion stands at 46.23%. Current active subscriptions generate approximately $175,868.51 in monthly recurring revenue, with average revenue of $15.70 per active subscriber. However, the catalogue is still highly dependent on licensed content, which drives 72.83% of watch hours, and several licences begin expiring immediately after the June 2026 reporting date. Overall, StreamFlix is growing and meeting its core operating thresholds, but retention and disciplined content investment should remain the main leadership priorities.

KPI Snapshot

Metric	Result	Metric	Result
Total watch hours	**3.33M**	Active rate	**74.66%**
Churn rate	**25.34%**	Avg. completion	**65.31%**

Top 3 Findings

1. **Engagement is growing quickly, but viewing is concentrated in a few content areas.**

   Drama leads the catalogue with about 502K watch hours, followed by Comedy at about 423K and Action at about 393K. TV Shows account for roughly 86.5% of watch hours, showing that long-form episodic content is the main driver of engagement.

2. **Subscriber health is above target, with clear room to improve retention.**

   The active rate is 74.66% and churn is 25.34%, so both subscriber-health thresholds are currently being met. Watchlist conversion is also above target at 46.23%, but more than half of saved titles still do not convert into viewing.

3. **StreamFlix relies heavily on licensed content.**

   Licensed titles generate 72.83% of total watch hours, compared with 27.17% from Originals. At the same time, licence expiries begin immediately after the reporting date, so renewal decisions need to be tied closely to engagement and investment efficiency.

Risks Identified

- **Retention risk:** A 25.34% churn rate is below the 30% ceiling, but it still represents more than one quarter of the subscriber base. The platform should not treat the current result as comfortable simply because it is within target.
- **Catalogue dependency:** Nearly three quarters of watch hours come from licensed content. Heavy reliance on external licences exposes StreamFlix to renewal costs, availability risk and possible engagement loss if high-performing titles leave the platform.
- **Investment efficiency:** Watch hours per $1K spent vary meaningfully by genre. Animation performs best at about 0.21 watch hours per $1K, while several other genres generate lower returns. Large catalogue spending therefore needs tighter prioritisation.

Opportunities

- Focus content investment on high-engagement genres and formats. Drama, Comedy and Action generate the most watch time, while TV Shows dominate total viewing. These areas should receive the strongest acquisition, renewal and promotion support.
- Use the United States and India as priority growth markets. The United States is the largest viewing market and India ranks second, giving StreamFlix two clear markets for localisation, targeted promotions and content partnerships.
- Increase conversion from saved intent to viewing. With watchlist conversion at 46.23%, reminders, personalised recommendations and better watchlist surfacing could convert more saved titles into actual sessions.
- Build Originals selectively in proven categories. Originals already generate 27.17% of watch hours, providing a base to grow owned content while reducing long-term dependence on external licences.

Recommendations

1. **Prioritise churn reduction.** Create a retention programme for subscribers showing declining activity, unresolved support issues or reduced viewing. Track churn monthly and set a near-term goal to move below 23%.
2. **Rank licence renewals by business value.** Before renewing any expiring title, compare its watch hours, completion, audience size and watch hours per $1K spent. Protect high-performing titles first and reduce spend on weak catalogue areas.
3. **Invest more selectively in Originals.** Use the strongest genres and viewing patterns to guide new Original content. Test smaller releases first, then scale categories that show strong watch time and completion.
4. **Improve Smart TV and mobile experience.** Smart TV and Mobile together account for more than 61% of viewing sessions. Prioritise playback reliability, discovery and recommendation quality on these devices.
5. **Turn watchlists into viewing.** Use personalised reminders, “continue from watchlist” prompts and targeted recommendations to raise watchlist conversion beyond the current 46.23%.

Management takeaway: StreamFlix is growing from a healthy base. The next stage should focus on keeping more subscribers, protecting the highest-value licensed content and directing future content spend toward the areas that produce the strongest engagement.
